1. About This Document

About this note

- **693 companies · 3,440 unique problems** (823 Easy / 1828 Medium / 789 Hard), from 20,627 company-question reports. **Each company table shows its top 100 by frequency.** The cross-company rankings use the full data.
- **Source:** LeetCode company tags via the community dataset liquidslr/leetcode-company-wise-problems (snapshot **20 Oct 2026**), merged with the earlier version of this note so older questions aren't lost. Another **228 companies** (and extra questions for 30 existing ones listed under other names, e.g. Snapchat → Snap, Twitter → X) come from snehasishroy/leetcode-companywise-interview-questions (Aug 2026) and krishnadey30/LeetCode-Questions-CompanyWise (older, 2021–22). Companies with only 1–3 questions have very little reported data, so lean on the category packs for them.
- **Verified against live LeetCode (5 Nov 2026):** every link, title, problem number, difficulty, acceptance rate, topic tags and Premium status was checked against LeetCode's own API.
- These are *reported* questions from people who interviewed. Treat them as **patterns to practice**, not a leaked question paper.

How to read the tables

Column / mark	Meaning
LC	LeetCode problem number
Freq	Relative frequency *within that company*. 100 = that company's most-reported question. You **can't** compare it across companies.
Acc	Acceptance rate on LeetCode (lower = trickier)
Red bold title	Reported at that company in the **last 6 months** (as of Oct 2026). Do these first.
Premium	LeetCode Premium-only. Search the title on GFG / YouTube for the free version, or skip it.
Easy · **Medium** · **Hard**	Difficulty colour

How to use this for an OA / interview

1. **Before every company:** do all its recent (red) problems, then the top 20–30 by Freq.
2. **If the company is small, or not listed:** use its *category* list below plus the cross-company Top lists. OAs at startups draw from the same core patterns.
3. **Timebox it:** if you can't get an approach in 20–25 min, read the solution, then **re-solve it from scratch after 2–3 days**.
4. **Track it:** tick problems in *Striver A2Z DSA Sheet* / *DSA Questions — Quick Revision* so you don't redo ones you already know.
5. **OA ≠ interview:** OAs (HackerRank / HackerEarth / CodeSignal / Codility / Mettl / iON) are usually 2–4 problems in 60–120 min, scored on hidden test cases. **Edge cases and time complexity matter more than clean code.** Practice under a timer with no IDE autocomplete.

2. Company Index (A–Z)

4. Companies With Little or No Data & OA Formats

These companies hire freshers through OAs but have no LeetCode company-tag data, or only 1–7 reported questions (those link to their own short list), so there is **no reliable full question list** for them. Don't trust random "X OA questions" lists. Prepare with the closest proxy companies below, then check recent experiences on **LeetCode Discuss (Interview Experience), GFG Interview Experiences, Glassdoor and LinkedIn posts** in the 2–3 weeks before the test.

What OAs usually look like, by company type

Type	Typical format	Focus
Indian startups / product	2–4 coding problems, 60–120 min; sometimes MCQs (OS / DBMS / CN / OOPS)	Arrays, strings, hashing, sliding window, greedy, binary search on answer, graphs (BFS/DFS), DP (1D/2D, knapsack)
Quant / HFT	2–3 hard problems + math / probability / puzzles; strict time limit	DP, greedy proofs, bit manipulation, combinatorics, expected value. C++ speed helps
Big Tech	2 problems in 60–90 min (Amazon also adds a work-style survey)	Medium-level: trees, graphs, heaps, intervals, DP
Service-based	Aptitude + verbal + 1–2 easy/medium coding problems	Strings, arrays, math, basic recursion. Aptitude decides who gets shortlisted
Semis / hardware	Coding + C/C++ output MCQs + OS / digital / COA	Bit manipulation, pointers, linked lists, memory

OA-specific habits

- Read the constraints first. `n ≤ 10^5` means O(n log n) or better, `n ≤ 20` means bitmask / backtracking, `n ≤ 500` means O(n³) is OK.
- Use `long long` / `long` for sums and products. Overflow is the #1 cause of hidden test cases failing.
- Partial scoring is common, so submit a brute force first, then optimise.
- Keep a fast-I/O template ready (C++ `ios::sync_with_stdio(false)`, Java `BufferedReader`).

5. Company-wise Lists

Each company starts with its question count, difficulty split and how many were asked recently, followed by its questions sorted by frequency. Problem titles in **red bold** were reported in the last 6 months; *Premium* marks LeetCode Premium-only problems. Difficulty is colour-coded **Easy**, **Medium**, **Hard**. Use the company index (section 2) to jump to any company.
